Practical Title: Event Management CRUD with Poster Upload and File Validation

Problem Definition: Develop event management functionality for admin users. Admin can add, view, update, delete, and upload event posters with server-side file type and file size validation.

Theory :

1. Are add, update, and delete functionalities implemented correctly?

Yes. Admins can create events with title, category, description, date, venue, and poster; modify existing events with optional poster replacement (old file unlinked); and delete events.

2. Is the UI linked with the database correctly?

Yes. A responsive card layout displays events with poster images, category badges, formatted dates, venue info, and action buttons — all queried dynamically from MySQL.

3. Are poster uploads validated for type and size?

Yes. **File Size:** Limited to 2MB. **MIME Type:** Verified using `finfo_file()` to ensure authentic images (`image/jpeg`, `image/png`, `image/webp`), preventing executable spoofing via extension manipulation.

4. What upload security extensions are included?

Files are renamed using `bin2hex(random_bytes(8)) . '_' . time()` to prevent path traversal and collisions. PHP execution is disabled inside `uploads/` via an `.htaccess` rule (`php_flag engine off`).

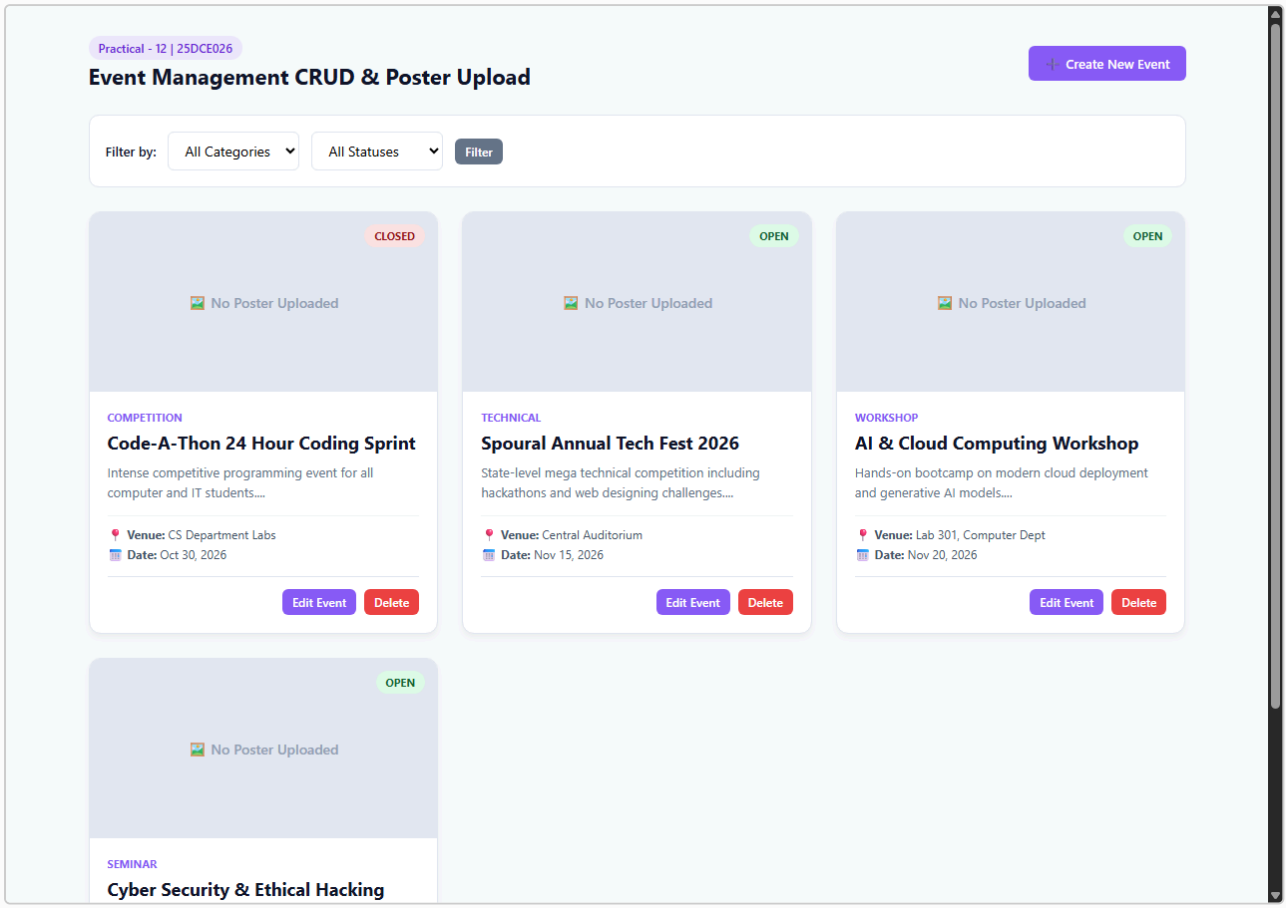

Implementation / Output / Result

```
// Server-Side MIME Validation (finfo)
$finfo    = finfo_open(FILEINFO_MIME_TYPE);
$mime     = finfo_file($finfo, $file['tmp_name']);
finfo_close($finfo);
if (!in_array($mime, ['image/jpeg','image/png','image/webp']))
    $errors[] = "Invalid file type. Only JPG, PNG, and WebP allowed.";
```

Output 1: Event Management Catalog with Uploaded Posters & Category Badges

Live browser screenshot: Responsive event card grid — Spoural Tech Fest, AI & Cloud Computing Workshop, Cyber Security Symposium, Code-A-Thon.

Output 2: Add Event Form with Poster Upload Controls

Live browser screenshot: Add Event form with title, category, description, event date, venue, and file input for poster upload.

Learning Outcomes:

- Developed a full Event Management CRUD portal in PHP and MySQL.
- Implemented server-side file inspection using PHP `finfo` MIME validation and size restrictions.
- Guarded against Arbitrary File Upload (AFU) vulnerabilities using cryptographic renaming and `.htaccess` execution blocks.
- Maintained media storage integrity by automatically unlinking replaced or deleted poster images.
- Designed a responsive card-based event catalog with dynamic status and category badges.
- Integrated category and status filters for customized event queries.
